

THE BACK OF THE BOOK

APPENDIXES

[I put all these things in here, and there are quite a few things, not because I didn't think they were important. I put them "back here" because they seemed to deserve their own spots, and those spots didn't seem to fit much with the flow, for want of a better word, of the manuscript proper.]

Very important!

What's not back here is the "Loading for the M14" material. It's some of the best stuff I've written but we thought it needed its own space, and more space than we had here. Rather than cut the fool out of it, we decided to offer it as a fully developed and illustrated download on the web site. It's possible to print it out and put the pages right in the book, and there are a lot of pages to put. Go check it out. It talks about powder, case, primer, and bullet selection, sizing, tools, gas system function and maintenance, and addresses slam fires in deep detail. If you shoot an M14, or M1, you need to read it! Here's where it lives: <http://www.zediker.com/downloads/m14.html>

CONTENTS

A.1 Improving Standard Tools

- 410 Sizing Die
- 411 Seating Die
- 412 Meters
- 413 Floating Fixtures

A.2 Progressive Reloading Machines

A.3 Coated Bullets

- 416 Read This First
- 417 Moly Coating
- 418 The Good Part
- 420 Bullet Effects
- 420 Abated Erosion
- 422 Polluted Precision
- 422 Making Moly Work
- 424 MC Cleaning
- 427 Alternates and Alternatives
- 427 Taking a Shine To It [FinalFinish™]

A.4 Long Range

A.5 Tool Talk

- 434 Balancing the Budget
- 435 Spending Wisely
- 437 My Mean Streak
