

# SECTION 4 BULLETS

[ambassadors of our efforts]

Let's argue that the bullet has to be the most important component in ammunition because it's the one that hits the target. Not much discordant rumpus stirring from that hypothesis. All other things being equal, regardless if they ever truly are, the difference between good performance and poor performance is usually the bullet. (It's also clear why a barrel is probably the most influential difference between good and great accuracy also: that's where the bullet lives, or dies.)

## CONTENTS

<b>4.1 Bullet Basics</b>	<b>4.4 Bullet Performance</b>
173 The "Pressure Ring"	209 Ballistic Coefficient (bc)
174 Culls & Keepers	213 Flying Lessons
176 J4®	215 Flight Patterns
182 Basic Bullet Blueprint	218 Performance Prognosis
182 Bulletmaking	220 Projections
<b>4.2 Barrel Effects</b>	224 Parting Shots
188 PT Cruising	225 Short Line Sufficiency
189 Twist Rate	229 Segregating for Short Line
192 Why Some Shoot Better	230 Short Courses, Short Bullets
194 Chambering Specifications	
196 Lands End	
198 Back Space	
<b>4.3 Bullet Jump</b>	
199 Determining Dead Length	
201 Everyone Needs One	
202 Setting Jump	
204 Soft Seating	
207 Maintaining Jump	
207 Rid Hard and Put Away Wet
